

FLUORESCENCE APPLICATIONS

in Biotechnology and Life Sciences

An Invitation to the 3rd Annual FABLS Workshop

Saturday February 3rd 2007

BIO21 Molecular Science and Biotechnology Institute, Melbourne

John Sedat

(UCSF, US)

OMX: the ultimate in high resolution fast 3-dimensional fluorescence microscopy

Dimitriy Chudakov

(Institute for Bioorganic Chemistry, Moscow)

Developments in fluorescent protein technology

Paul Mulvaney (University of Melbourne) Quantum dots

Brian Orr (Macquarie University) Nonlinear optics in bio-molecular microscopy

Nick Klonis (La Trobe University) Imaging membrane oxidation

David Bowser (Monash University) TIRF microscopy

Warwick Bowen (Otago University) Biosensing with microcavities

Taras Plakhotnik (UQ) Intracellular imaging with nanodiamonds

Liz Harry (UTS) Bacterial cytokinetic rings

Poster session

Attendance is free of charge to Network members upon registration

For membership of FABLS simply submit your details at

<http://www.physics.mq.edu.au/research/fluoronet/membersregister.php>

For more details and updates visit

<http://www.physics.mq.edu.au/research/fluoronet/GeneralAnnouncements.htm>

Organising committee

Mark Prescott (Mark.prescott@med.monash.edu.au)

Trevor Smith (Trevoras@unimelb.edu.au)

Leann Tilley (L.Tilley@latrobe.edu.au)
